Acknowledgements

The estimates in this report are based on analysis undertaken for the Southern Fishermen's Association (SFA), and presented in the report *Lakes and Coorong Fishery: "Wild Fisheries with a Future", Current Economic Value and Value-Adding Opportunities, Final Report* (EconSearch 2004a), funded by the Commonwealth Department of Transport and Regional Services' Regional Assistance Program.

The input, guidance and support provided by members of the SFA, particularly Garry Hera-Singh and Tracy and Glen Hill is greatly appreciated. EconSearch relied heavily on the voluntary cooperation of Lakes and Coorong Fishery licence holders in providing data for the 2003 and 2006 surveys of the fishery.

In the task of updating the indicators, EconSearch is indebted to various individuals and institutions for providing necessary information. PIRSA and SARDI Aquatic Sciences officers provided assistance, were supportive of data collection and offered valuable advice.

1. Introduction

All the major fisheries in South Australia (SA) operate in accordance with fishery management plans that determine the primary management objectives of the fishery. Economic performance indicators are a feature of these plans and annual reports on them are required by the Minister for Agriculture, Food and Fisheries to meet the obligations of section 7 of the *Fisheries Management Act 2007*.

This report, *Economic Indicators for the Lakes and Coorong Fishery, 2006/07*, is the fifth detailed economic indicators report prepared for the Lakes and Coorong Fishery, the first having been prepared for 2002/03 (EconSearch 2004b). The 2002/03 economic indicators were derived from a report prepared for the Southern Fishermen's Association (SFA), entitled *Lakes and Coorong Fishery: "Wild Fisheries with a Future", Current Economic Value and Value-Adding Opportunities, Final Report* (EconSearch 2004a), funded by the Commonwealth Department of Transport and Regional Services' Regional Assistance Program. The second and third reports, prepared for 2003/04 and 2004/05, respectively (EconSearch 2005a and 2006), provided an update of the survey based indicators. The fourth report, prepared for 2005/06, provided an update of the economic indicators based on a second survey of licence holders conducted in October 2006.

For earlier years, a limited number of economic indicators for the Lakes and Coorong Fishery were prepared in conjunction with the River Murray commercial fishery. The first report, entitled *Economic Indicators for the SA Inland Waters Fisheries 1997/98*, summarised information obtained from SARDI Aquatic Sciences and PIRSA Fisheries (EconSearch 1999). The second to fifth annual reports, prepared for the years 1998/99 to 2001/02, respectively, provided an update of the 1997/98 economic indicators (EconSearch 2000, 2001, 2002 and 2003).

The objective of this report, *Economic Indicators for the Lakes and Coorong Fishery, 2006/07*, was to provide an update of the economic indicators based on the second licence holder survey.

The aim of all the studies has been to present a set of economic performance indicators for the fishery as well as to develop a consistent time series of economic information to aid management of the fishery in future years. The economic indicators detailed in this report include:

- gross value of production (catch and price);
- the cost of management of the fishery;
- financial performance indicators (income, costs, profit and return on investment);
- the economic impact of the fishery, both local and state;
- economic rent;
- external factors that influence the economic condition of the fishery;
- prices in local and interstate markets;
- contribution to the community; and
- a range of demographic and other indicators.

For purposes of comparison, summary economic indicators for all South Australian commercial fisheries, up to 2005/06, are presented in Appendix 2.

2. Method of Analysis and Definition of Terms

2.1 Survey of Lakes and Coorong Licence Holders, 2006

The questionnaire for the survey of licence holders was based on the survey conducted in 2003. The questionnaire for the survey was drafted by the consultants and subsequently modified after consultation with members of the Southern Fishermen's Association (SFA). The sampling frame for the survey included all licence holders in the Lakes and Coorong Fishery (36 licences in total)¹. The time period for which information was sought was the 2005/06 financial year.

Licence holders were sent an introductory letter from the President of the SFA outlining the project and seeking their support. Telephone calls were then made by an EconSearch representative to each licence holder seeking their participation in the survey. Interview times were arranged with willing participants. A copy of the questionnaire and other relevant information was posted to each participating licence holder prior to the interview. EconSearch representatives visited licence holders to conduct face-to-face interviews over the period 12 to 20 October 2006.

A total of 24 usable responses were collected, twelve licence holders did not provide a response to the survey for the following reasons:

- not contactable (3);
- not interested in participating in the survey (3);
- too busy to participate in the survey (1);
- minimal fishing days during 2006/07 and was unable to provide financial records (2); and
- only purchased licence recently and was unable to provide financial records (3).

A total of 24 useable licence holders represented two-thirds of the licences in the fishery.

2.2 Updating the Indicators, 2006/07

The 2006/07 economic indicators for the Lakes and Coorong Fishery were derived using a range of primary and secondary data and survey-based 2005/06 indicators. The following information was used to adjust the 2005/06 indicators to reflect the fishery's performance in 2006/07.

- SARDI data were used to reflect changes in catch size and its value between 2005/06 and 2006/07. Catch and value data were used to determine the gross income in the fishery.
- Information on the change in fishing effort (number of days fished) between 2005/06 and 2006/07 was used to adjust the costs of inputs that were assumed to vary with fishing effort. These inputs included fuel and repairs and maintenance costs.
- Price information from input suppliers was used to adjust prices that had changed, for example, fuel.

¹ There were 37 licences in the fishery in 2005/06 one of which was sold during that year. Accordingly, the sample for the 2005/06 survey was 36 licences.

- The consumer price index (CPI) for Adelaide was used to adjust the cost of inputs to reflect local levels of inflation (ABS 2007).

2.3 Definition of Terms²

Gross value of production (GVP) is the total year's catch for the whole fishery valued at the landed beach price.

Gross income (Total boat cash receipts) is the income received by the individual licence holder from the sale of fish prior to any deductions for freight and selling charges.

Cash costs (Total boat variable and fixed costs) include the payments for hired labour and materials and services (including payments on capital items subject to leasing, rent, interest, licence fees and repairs and maintenance). If family or other labour were unpaid, an estimate of the cost of labour was made based on the time spent on fishing business related activity.

Cash operating surplus (Boat cash income) is the difference between gross income and total cash costs. It has been calculated both with and without the imputed value of unpaid labour included in cash costs.

Depreciation is a non-cash cost representing the wear and tear on capital items during the year. Participants in the survey were asked for information on the age, current value and current replacement cost of each item. This was to be used to determine the depreciation rate of fishing equipment.³

Earnings before tax is defined as cash operating surplus less depreciation.

Earnings before interest and tax (Boat business profit) is defined as cash operating surplus less depreciation plus interest.

Capital is defined as the value placed on assets employed by the fishing business. It includes the total gross value of the boat, including the value of the hull, engine and other on-board and shore based plant, equipment and structures. Estimates are also reported for the value of licences.

Rate of return to fishing gear and equipment is calculated by expressing earnings before interest and tax as a percentage of the capital value of fishing gear and equipment. The rate of return to fishing gear and equipment provides an indication of the impact of management changes on the fishery.

Rate of return to total capital is calculated by expressing earnings before interest and tax as a percentage of total capital.

² Where possible definitions have been kept consistent with those used by Brown (1997) in the *Australian Fisheries Survey Report*.

³ An allowance for depreciation of a capital item was estimated using the formula $(R-C)/A$ where R = replacement cost of the item, C = current value of the item and A = age of the item in years.

3. Economic Indicators for the Lakes and Coorong Fishery

3.1 Gross Value of Production and Catch

The principal information used to estimate the gross value of production (GVP) for the South Australian Lakes and Coorong Fishery is derived from the catch and effort database administered by SARDI Aquatic Sciences.

It is acknowledged that SARDI's estimates of the GVP of fish harvested from the Lakes and Coorong Fishery are underestimated because average values are based on wholesale prices received at the Adelaide market. Baker and Pierce (1998) believed this to be an unrealistic premise. They suggested that a significant proportion of some of the more financially important species are marketed either at the Sydney and Melbourne markets or locally, where prices received are considerably higher than can be obtained at the Adelaide market. Licence holders participating in the surveys in 2003 and 2006 confirmed that fish are marketed at a wide variety of locations, including the Sydney and Melbourne fish markets.

Baker and Pierce (1998) re-assessed 1996/97 SARDI catch data using prices from local and interstate markets, as well as individual estimates of local value-adding provided by the fishers to account for the higher prices received at alternative markets. For the purpose of this study, SARDI estimates of GVP for the period 1992/93 to 2001/02 have been re-valued using Baker and Pierce's (1998) method. However, as these readjustment factors were derived from 1996/97 data, SARDI estimates of GVP for 2002/03 to 2004/05 have been revised using updated readjustment factors derived from a weighted average of 2002/03 fish prices from the Adelaide, Sydney and Melbourne fish markets. The market weightings were derived from the EconSearch survey of licence holders in 2003. The SARDI estimates of GVP for 2005/06 and 2006/07 have also been revised using readjustment factors based on weighted averages of 2006/07 Adelaide, Sydney and Melbourne market prices. Weightings were based on the 2006 survey of licence holders.

The reported catch levels of species caught by fishers in the Lakes and Coorong Fishery for the period 1992/93 to 2006/07 are shown in Table 3.1. The total catch of fish in 2006/07 was 2,443 tonnes, slightly more than the total weight of fish caught in 1992/93. Table 3.1 and Figures 3.1 and 3.2 demonstrate that catch levels have fluctuated significantly during the fourteen-year period from 1992/93 to 2006/07.

The estimated GVP of species caught by fishers in the Lakes and Coorong Fishery for the period 1992/93 to 2006/07 is shown in Table 3.2. The estimated GVP of the fishery increased by 101 per cent in nominal terms from \$3.5 million in 1992/93 to over \$7.1 million in 2006/07. While the Lakes and Coorong Fishery's GVP over the fourteen-year period (1992/93 to 2006/07) trended upwards in nominal terms, the consumer price index for Adelaide also increased (by 44 per cent) over the same period (ABS 2007). This means that, in real terms (i.e. in 1992/93 dollars), the value of the catch in the Lakes and Coorong Fishery in 2006/07 was 40 per cent higher than in 1992/93.

^a GVP estimates for 1992/93 to 2001/02 are based on re-estimated SARDI values using readjustment factors outlined in Baker and Pierce (1998). As these readjustment factors were derived from 1996/97 data, SARDI's GVP estimates for 2002/03 to 2004/05 have been revised using updated readjustment factors derived from a weighted average of 2002/03 fish prices from the Adelaide, Sydney and Melbourne fish markets. The market weightings were derived from the 2003 EconSearch survey of licence holders. SARDI's estimates of GVP for 2006/07 have been revised based on updated readjustments factors derived from 2006/07 market prices and market weightings from the 2006 licence holder survey. Information provided by licence holders in the 2006 survey suggests that re-valued estimates of GVP for some species may have been overstated in previous years.

^b In 1992/93 dollars.

Source: Knight et al. (2004), Baker and Pierce (1998), SARDI Aquatic Sciences and EconSearch analysis

The catch of lower volume species in the fishery over the period 1992/93 to 2006/07 is shown in Figure 3.1. Catch levels of flounder and redfin have fluctuated significantly from year to year. A long-term decline in the quantity of redfin caught is evident. Very small quantities of flounder, black bream and Australian salmon were caught in 2006/07, relative to other species.

Figure 3.1 Catch of lower volume species, Lakes and Coorong Fishery, 1992/93 to 2006/07 ^a

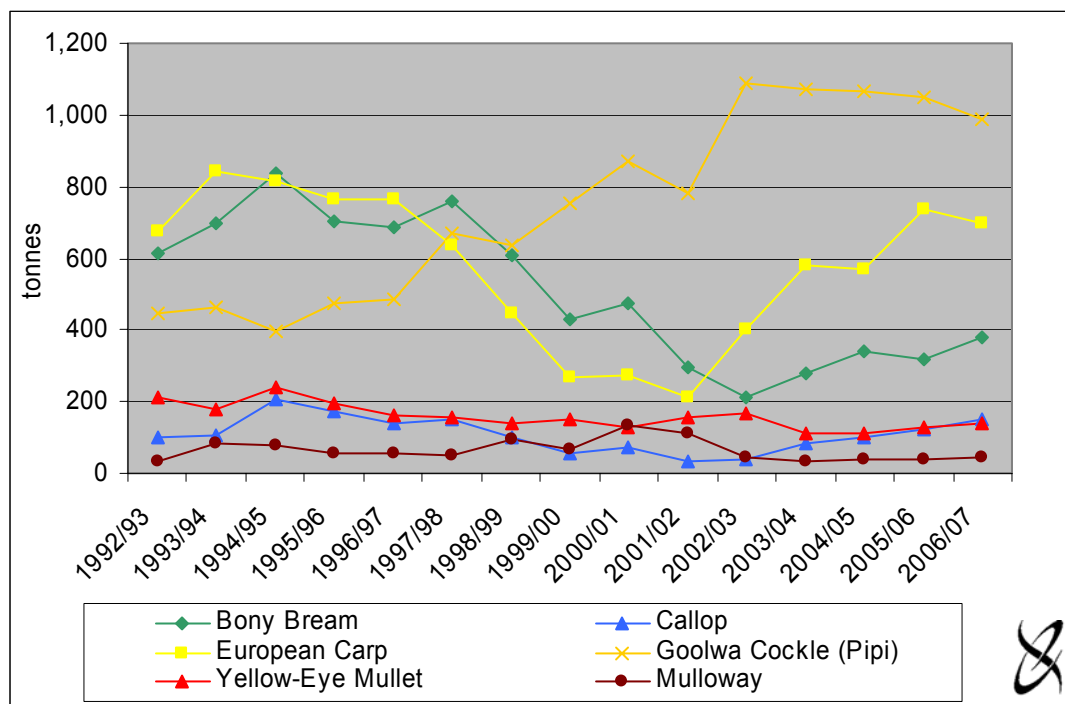

^a Note that Redfin catch was not published separately in 2003/04 to 2006/07 and has been included in the 'other species' category.

Source: Knight et al. (2004) and SARDI Aquatic Sciences.

Figure 3.2 outlines the catch of higher volume species over the period 1992/93 to 2006/07. Notable trends include the significant increase in the quantity of Goolwa cockles harvested (122 per cent) and the significant decline in the reported bony bream (38 per cent) catch⁴ and Yellow-Eye Mullet catch (33 per cent) during the fourteen-year period.

⁴ Survey respondents indicated that considerable quantities of European carp and bony bream caught cannot be sold and are thus discarded. As licence holders generally do not record these discarded fish in their monthly log book returns, SARDI catch estimates for these species, as reported in Table 3.1 and Figure 3.2, may be underestimated.

Figure 3.2 Catch of higher volume species, Lakes and Coorong Fishery, 1992/93 to 2006/07

Source: Knight et al. (2004) and SARDI Aquatic Sciences.

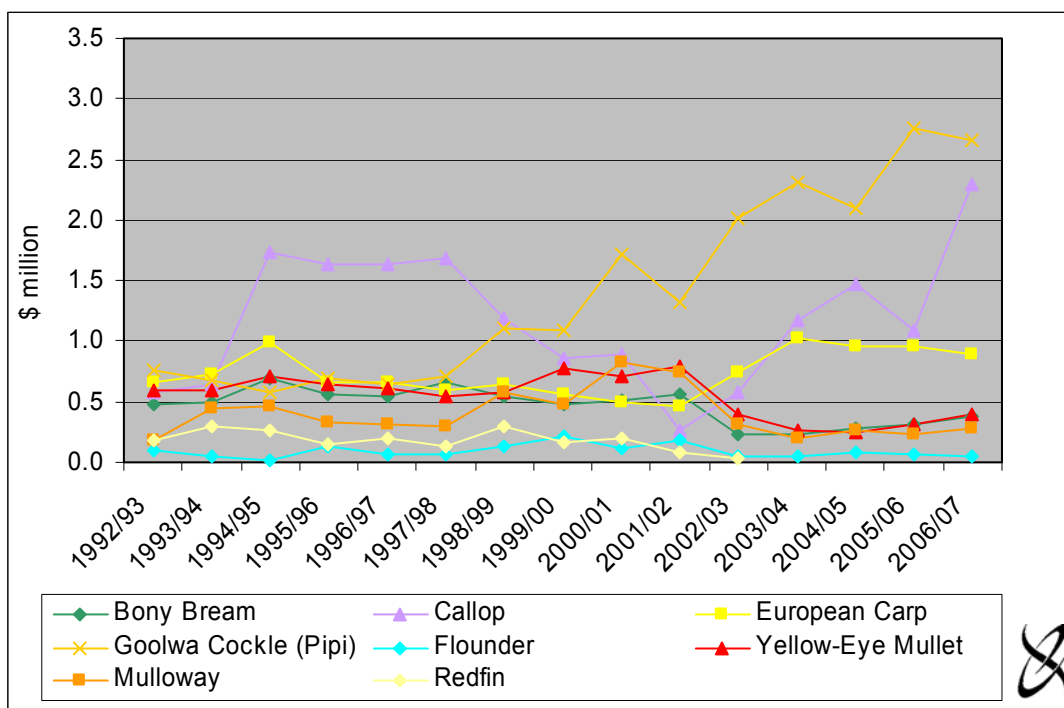

Figure 3.3 outlines the gross value of production of the most significant species over the period 1992/93 to 2006/07. As with catch, GVP by species has fluctuated significantly⁵.

Figure 3.4 outlines the total catch and value of all species taken by licence holders in the Lakes and Coorong Fishery over the period 1992/93 to 2006/07. These data, together with the information shown in Table 3.1, are interesting as they demonstrate the high level of variability of catch for individual species and total catch over time. Figure 3.4 also shows that aggregate income has remained relatively steady over that time, which suggests that effort is switched from financially unviable species to more lucrative species in response to changing market and environmental conditions.

In recent years, GVP has increased steadily from approximately \$4.5 million in 2002/03 to \$7.1 million in 2006/07 (in nominal terms). This has been the result of an increase in both catch and price over the period. Even in real terms (prices adjusted for inflation), GVP has increased by almost 42 per cent over that 4-year period.

⁵ Factors other than abundance, such as annual variations in 'catchability', effort targeting and market conditions (especially supply of competitive product) can also influence the variability shown in Figures 3.3 and 3.4.

Figure 3.3 Gross value of production of major species, Lakes and Coorong Fishery, 1992/93 to 2006/07 ^a

^a Note that Redfin value of production was not published separately in 2003/04 to 2006/07 and has been included in the other species category (Figure 3.2).

3.2 Cost of Management

South Australian commercial fisheries operate under full cost recovery. Accordingly, licence fees are set to cover the cost of managing the fishery. Management services include:

- annual reports on biological and economic indicators;
- policy and management services;
- regulatory/legislation and licensing services;
- compliance services;
- directorate services;
- extension services;
- research services, including the Fisheries Research and Development Corporation (FRDC) levy; and
- services of the various fishery management committees.

For the purpose of this analysis, the cost of providing management services has been assumed to be equal to the gross receipts from licence fees in the fishery.

Table 3.3 shows the cost of management for the fishery for the period 1996/97 to 2007/08.

The following can be observed for the fishery for the period 1996/97 to 2006/07.

- Actual licence fee receipts increased 121 per cent from approximately \$136,000 in 1996/97 to just over \$299,000 in 2006/07, in real terms an increase of 68 per cent.
- Licence fees as a percentage of GVP increased from 2.9 per cent in 1996/97 to 4.2 per cent in 2006/07, reflecting a significant increase in licence fees (121 per cent) and an increase in GVP of 50 per cent over the same period.
- The management cost per kilogram of catch increased from \$0.06/kg in 1996/97 to \$0.12/kg in 2006/07, reflecting a slight increase in catch and an increase in licence fees.
- The average management cost per licence holder increased from \$3,478 in 1996/97 to \$8,094 in 2006/07, reflecting a decrease in the number of licence holders (from 39 to 37) and an increase in total management costs⁶.

Average fee per licence holder decreased by approximately 6 per cent between 2006/07 and 2007/08, from \$8,094 to \$7,614, reflecting a decrease in total licence fees.

In 2006/07 the Lakes and Coorong Fishery licence fees were comprised of a base fee of \$6,591, a Goolwa cockle SASQAP fee of \$652 (applicable to 29 licences) and a marine scale net fee of \$1,834 (applicable to 20 licence holders).

⁶ Note that the average management cost per licence holder excludes the \$40,000 in drought relief funds received in 2003/04 and 2004/05. If this was included, the average management cost per licence holder would have been \$6,396 in 2003/04 and \$7,643 in 2004/05.

Table 3.3 Cost of management in the Lakes and Coorong Fishery, 1996/97 to 2006/07 ^a

	Licence Fees ^b (\$'000)	Gross Value of Production (\$'000)	Fees/GVP (%)	Catch ('000kg)	Fees/Catch (\$/kg)	Licence Holders (no.)	Average Fees/ Licence Holder (\$/licence)
1996/97	136	4,747	2.9%	2,354	\$0.06	39	\$3,478
1997/98	171	4,756	3.6%	2,465	\$0.07	39	\$4,395
1998/99	150	5,107	2.9%	2,102	\$0.07	38	\$3,940
1999/00	173	4,689	3.7%	1,807	\$0.10	38	\$4,549
2000/01	179	5,525	3.2%	2,013	\$0.09	38	\$4,698
2001/02	175	4,502	3.9%	1,640	\$0.11	38	\$4,595
2002/03	185	4,466	4.1%	1,979	\$0.09	37	\$5,001
2003/04 ^c	197	5,382	3.7%	2,120	\$0.09	37	\$5,315
2004/05 ^c	243	5,495	4.4%	2,198	\$0.11	37	\$6,562
2005/06 ^c	265	5,924	4.5%	2,352	\$0.11	37	\$7,175
2006/07 ^c	299	7,330	4.1%	2,383	\$0.13	37	\$8,094
2007/08	282	n.a.	-	n.a.	-	37	\$7,614

^a In addition to licence fees collected, \$40,000 in drought relief funds were received in both 2003/04 and 2004/05 from the SA Government to assist in the management of the fishery (Alice Fistr PIRSA, pers comm.).

^b Comprised of base licence fees (\$262,788 in 2006/07) and marine scale net fee (\$36,689 in 2006/07).

^c Includes South Australian Shellfish Quality Assurance Program (SASQAP) fee incurred by Goolwa Cockle fishers (\$18,908 in 2006/07).

Source: PIRSA Fisheries, SARDI Aquatic Sciences.

In 2007/08 all licence holders with access to Goolwa cockles were no longer required to pay the SASQAP fee. Fishers who catch cockles for human consumption now must be accredited under the Seafood Food Safety Scheme. Currently there are 9 businesses who are accredited under the scheme, covering 13 fishing licences. To obtain and maintain accreditation each fisher must comply with certain requirements relating to the harvest and handling of cockles. Each fisher must also pay an application fee and an annual fee to maintain accreditation. The fees associated with the food safety scheme are detailed in Table 3.4.

Table 3.4 Food safety schemes accreditation fees, 2007/08

Description	Fee (\$)
Application for accreditation or for approval of a food safety arrangement other than in conjunction with an application for accreditation	\$380
Annual Fee	
- per business	\$163
- per licence	\$1,620

3.3 Summary of Factors Affecting Costs

The information outlined in Table 3.5 was used to adjust the 2003/04 financial indicators to reflect the costs incurred in the fishery in 2004/05.

Table 3.5 Factors affecting costs in the Lakes and Coorong fishery, 2005/06 and 2006/07

	2005/06	2006/07	Change
Total days fished ^a	7,895	7,886	-0.1%
Price of fuel - Transportation Index ^b	158.8	160.9	1.3%
Interest charges (%/annum) ^c	8.2%	8.8%	7.3%
CPI Adelaide ^d	157.6	160.3	1.7%

^a Source: SARDI Aquatic Sciences (Angelo Tsolos pers. comm.).

^b ABS transportation index for Adelaide (ABS 2007).

^c RBA indicator lending rate for small business (RBA 2007).

^d Consumer price index for Adelaide (ABS 2007).

- Information from SARDI on the change in fishing effort (total days fished) was used to adjust costs that vary depending on the amount of time spent fishing. These costs include the cost of fuel, repairs and maintenance, bait and provisions.
- The ABS transportation index for Adelaide was used to adjust the cost of fuel.⁷
- Interest charges were adjusted in accordance with the Reserve Bank of Australia (RBA) indicator lending rate (i.e. weighted average interest rate for small businesses with outstanding credit).
- The CPI for Adelaide was used to adjust other costs incurred in the fishery. Other costs include, legal and accounting costs, office and administration, telephone expenses and other incidental costs.

3.4 Financial Performance Indicators

The major measures of the financial performance of licence holders in the Lakes and Coorong Fishery for the period 2002/03 to 2006/07 are shown in Table 3.6. Estimates of financial performance for 2002/03 to 2004/05 were derived from the 2003 survey of licence holders. Financial performance estimates for 2005/06 and 2006/07 were based on a second licence holder survey conducted in 2006.

⁷ The transportation index provides an indication of the change in the cost of fuel between years rather than the actual price of fuel.

Table 3.6 Financial performance in the Lakes and Coorong Fishery, 2002/03 to 2006/07 (average per licence)

	2002/03		2003/04		2004/05		2005/06		2006/07

^a Total cash costs.

^b Labour costs include an imputed wage to operators and other family members who are not paid a wage directly by the business (\$54,459 per licence in 2006/07).

^c Licence fees for 2002/03 to 2004/05 have been calculated based on the cost indicated by licence holders in the 2003 survey and change in the average fees per licence holder in subsequent years. Licence fees reported for 2005/06 and 2006/07 have been calculated based on the cost indicated by licence holders in the 2006 survey responses and change in average fees per licence holder (Table 3.4).

^d Change in the value of fishing gear and equipment between 2005/06 and 2006/07 has been estimated based on the average number of boats purchased by licence holders over the last 5 years.

^e Estimates of the 2002/03 to 2004/05 licence values were derived from the licence holder's estimate of the value of their licence in the 2003 survey. Estimates of the 2006/07 licence value reflect licence holders estimates of the value of their licence in the 2006 survey updated for changes in the value of the fishery. As there have been a limited number of licences traded in recent years it is difficult to estimate the actual market value of a fishing licence.

Source: Licence holder survey and EconSearch analysis.

Income...

The average gross income per licence in the Lakes and Coorong Fishery in 2006/07 was approximately \$216,000 (Table 3.6), 12 per cent higher than 2005/06, reflecting a slight increase in catch (Table 3.1) and an increase in prices in the fishery.

Cash Income and Profit...

The labour costs reported in Table 3.6 are comprised of payments to licence owners and crew as well as an imputed wage to those licence owners and other family members who are not paid a wage directly by the business. Accordingly, cash operating surplus was calculated by including imputed wages as part of cash costs. The 2006/07 average cash operating surplus per licence was estimated to be over \$65,000.

Cash operating surplus and earnings before tax (business profit) indicate the capacity of the operator to remain in the fishery in the short to medium term. In 2006/07, the average earnings before tax were over \$43,000 per licence.

Return on Investment...

For the purpose of this analysis, 'investment' is considered to be the capital employed by a licence holder in the fishery. Capital includes boats, licence, fishing gear, sheds, vehicles and other capital items used as part of the fishing enterprise. It does not include working capital or capital associated with other businesses operated by the licence holder.

The average total investment in fishing gear and licence in the Lakes and Coorong Fishery in 2006/07 was estimated to be approximately \$362,000 per fisher. This included the licence holder's estimate of the value of their licence (\$214,000)⁸ and estimated investment in boats and fishing gear (approximately \$148,000 per licence).

Licence holders indicated that, due to the inherent variability in the fishery, little money is spent on boats and gear in difficult years, as fishers try to keep costs to a minimum. In more profitable years, however, investment in boats and gear increases, with surplus supplies being purchased and stored for use in years when fishing incomes decline.

Qualitative information from the 2006 survey indicated that investment in boats and fishing equipment had been relatively low in recent years (and hence a relatively low level of depreciation – Table 3.6). It is estimated, based on historical data on the number of new boats purchased, that the value of fishing gear and equipment per licence holder increased slightly between 2004/05 and 2006/07.

For the Lakes and Coorong Fishery as a whole, the average rate of return to fishing gear and equipment was estimated to be 32.7 per cent in 2006/07. Rate of return to total capital (gear and licence) was estimated to be 13.4 per cent⁹. The slight increase in the rates of return can be attributed to the increase in earnings in the fishery being greater than the rate of increase in the value of capital.

⁸ There were two licences traded in the Lakes and Coorong Fishery in 2006/07. For confidentiality reasons the value of these trades can not be reported.

⁹ These estimates, as with those made elsewhere in this report, are sensitive to the accuracy of survey responses and assumptions made in calculating depreciation and labour costs.

The question of what is a 'reasonable' average rate of return should be considered in light of the riskiness of the industry. Operating a fishing business is a relatively high-risk activity, with some of the major risks arising from market uncertainty (price risk), seasonal variability (environmental risk) and uncertainty regarding long-term resource security (institutional risk).

3.5 State and Regional Economic Impact

Estimates of the economic impact of the Lakes and Coorong fishing industry on the South Australian and regional (Murraylands¹⁰) economies in 2006/07 are outlined below.

3.5.1 Measuring direct and flow-on effects

Estimates of the direct economic impact of the Lakes and Coorong Fishery are consistent with the method employed in PIRSA's *Food for the Future* value-chain analysis, 2005/06¹¹.

The following stages in the marketing chain have, therefore, been included in the quantifiable economic impact:

- the landed beach value of production; and
- downstream impacts, including the:
 - net value of local (state and regional) processing;
 - value of local transport services at all stages of the marketing chain; and
 - net value of local retail and food service (e.g. hotels & restaurants) trade.

Each of these activities generates flow-on effects to other sectors through purchases of inputs and the employment of labour. These flow-on effects have been estimated using input-output analysis. Input-output analysis is widely used in economic impact analysis and is a practical method for measuring economic impacts at regional and state levels.

Economic impacts at the state and regional levels were based on models for the state as a whole and for the Murraylands region, respectively, prepared for the Regional Communities Consultative Council, Local Government Association of South Australia and Regional Development SA (EconSearch 2005b).

In order to compile a representative cost structure for the fishing sector, costs per boat were derived from data provided by operators in the fishery in the financial survey for 2006/07, described earlier. On an item-by-item basis, the expenditures were allocated between those occurring in the Murraylands region, those occurring in South Australia and those goods and services imported from outside the state.

¹⁰ The Murraylands is comprised of the statistical division of the Murraylands, as defined by the ABS.

¹¹ The relevant information was obtained from Jack Langberg (PIRSA, pers. comm.).

Estimates of the net value of local (i.e. regional and state) processing margins and retail and food service trade margins were derived from PIRSA's *Food for the Future* value-chain analysis (*Seafood Scorecard, 2004/05*) (Jack Langberg, PIRSA, pers. comm.). Estimates of the net value of local transport margins and capital expenditure per licence holder were derived from the 2006 survey of licence holders.

Economic impacts have been specified in terms of the following economic indicators:

- value of output;
- employment;
- household income; and
- contribution to gross state or regional product.

Value of output is a measure of the gross revenue of goods and services produced by commercial organisations plus gross expenditure by government agencies. This indicator needs to be used with care as it includes elements of double counting.

Employment is a measure of the number of working proprietors, managers, directors and other employees, in terms of the number of full-time equivalent (fte) jobs.

Household income is a component of Gross State Product (GSP) and Gross Regional Product (GRP) and is a measure of wages and salaries, drawings by owner operators and other payments to labour including overtime payments and income tax, but excluding payroll tax.

Contribution to GSP or GRP is a measure of the net contribution of an activity to the state/regional economy. Contribution to GSP or GRP is measured as value of output less the cost of goods and services (including imports) used in producing the output. It can also be measured as household income plus other value added (gross operating surplus and all taxes, less subsidies). It represents payments to the primary inputs of production (labour, capital and land). Using contribution to GSP or GRP as a measure of economic impact avoids the problem of double counting that may arise from using value of output for this purpose.

3.5.2 Economic impacts at the state and regional levels

Estimates of the economic impact generated in 2006/07 by the Lakes and Coorong fishing industry in South Australia and the Murraylands region are outlined in Tables 3.7 and 3.8, respectively.

For each measure of economic activity, the impacts at the state level are greater than regional level impacts. This is to be expected, as the regional impact is simply a component, albeit a significant one, of the total state impact.

The direct impact measures fishing and downstream activities (i.e. processing, transport, retail/food services and capital expenditure). The flow-on impact measures the economic effects in other sectors of the economy (trade, manufacturing, etc.) generated by the fishing industry activities, that is, the multiplier effects.

Table 3.7 The economic impact of the Lakes and Coorong fishing industry in South Australia, 2006/07

Sector	Output		Employment ^a		Household Income		Contribution to GSP

^b Capital expenditure includes expenditure on boats, fishing gear and equipment, sheds and buildings, motor vehicles and other equipment.

^c Totals may not sum due to rounding.

Source: EconSearch analysis.

Value of output...

The value of output generated directly in South Australia and the Murraylands region by Lakes and Coorong fishing enterprises summed to \$7.1 million in 2006/07 (Tables 3.7 and 3.8), while output generated in South Australia by associated downstream activities (processing, transport, retail/food services and capital expenditure) summed to \$6.0 million (\$1.6 million in the Murraylands region, Table 3.8).

Flow-ons to other sectors of the state economy added another \$14.9 million in output (\$5.4 million in the regional economy). The sectors most affected were the manufacturing, trade, business services and transport sectors.

^a Full-time equivalent jobs. Direct employment in the fishing industry was comprised of 52 full-time jobs and 50 part-time jobs, that is, 103 jobs in aggregate.

^b Capital expenditure includes expenditure on boats, fishing gear and equipment, sheds and buildings, motor vehicles and other equipment.

^c Totals may not sum due to rounding.

Source: EconSearch analysis.

Employment and household income...

In 2006/07, the Lakes and Coorong Fishery was responsible for direct employment of around 74 full-time equivalents and downstream activities created employment of around 47 fte jobs state-wide. Flow-on business activity was estimated to generate a further 82 fte jobs state-wide (40 jobs regionally). These state-wide jobs were concentrated in the trade (26), business services (11) and manufacturing (9) sectors.

Personal income of \$3.1 million was earned in the fishing sector (wages of employees and estimated drawings by owner/operators) and \$1.7 million in downstream activities in SA. An additional \$4.0 million was earned by wage earners in other businesses in the state as a result of fishing and associated downstream activities. The total household income impact was \$8.9 million in SA (\$5.0 million in the Murraylands region).

Contribution to GSP and GRP...

As noted above, contribution to GSP or GRP is measured as value of output less the cost of goods and services (including imports) used in producing the output. In 2006/07, total Lakes and Coorong fishing industry related contribution to GSP in South Australia was \$14.4 million (\$8.3 million in the Murraylands region), \$4.8 million generated by fishing directly, \$2.4 million generated by downstream activities and \$7.2 million generated in other sectors of the state economy.

3.6 Economic Rent

Economic rent¹² is a measure of the economic efficiency with which a resource is utilised. If there are too many boats in a fishery, too much gear and too many people employed in a fishery, relative to the sustainable catch, business profits will be poor and economic rent will be correspondingly low or negative. With the prosperity of licence holders and legislative objectives in mind, a fishery should be managed in a manner that aims to maximise economic rent¹³.

The long term costs all need to be covered if the licence holder is to remain in the fishery. These long-term costs include direct operating costs such as fuel, labour (including the opportunity cost of a self employed fisher's own labour), bait, overheads such as administration and licence fees and the cost of capital invested in the boat and gear (excluding licence). Capital cost includes depreciation and the opportunity cost of the capital applied to the fishery. The opportunity cost is equivalent to what the fisher's investment could have earned in the next best alternative use.

The economic rent for the years 2002/03 to 2006/07 for the Lakes and Coorong Fishery is outlined in Table 3.9. The economic rent generated in the Lakes and Coorong Fishery was estimated to be approximately \$1.1 million in 2006/07 (Table 3.9), a 7 per cent increase compared to the previous year.

¹² Economic rent is defined as the difference between the price of a good produced using a natural resource and the unit costs of turning that natural resource into the good. In this case the natural resource is the Lakes and Coorong Fishery and the good produced is the landed fish.

¹³ Where a fishery has limited entry and transferable licences (as with the Lakes and Coorong Fishery), the licences will carry a value that reflects the economic rents generated by the fishery. That is to say, the rents are capitalised into the licence values. As many licence holders view their licence as, at least, one component of their retirement or superannuation fund, it is important that the fishery is managed in a way that maximises the rents generated by the fishery.

Table 3.9 Economic rent in the Lakes and Coorong Fishery, 2002/03 to 2006/07 ^a

	Economic Rent (\$'000)				
	2002/03	2003/04	2004/05	2005/06	2006/07
Gross Income	4,466	5,382	5,495	5,924	7,143
Less Labour	1,972	2,072	2,242	2,168	2,806
Less Cash Costs (materials and services less labour and interest)	1,530	1,591	1,717	1,785	2,013
Less Depreciation	504	519	650	556	725
Less Opportunity Cost of Capital (@10%)	303	312	391	375	489
Economic Rent	156	887	496	1,039	1,110

4. Other Indicators

4.1 Factors Influencing the Economic Condition of the Lakes and Coorong Fishery

There are a number of factors in 2006/07 that have impacted on the economic performance of the fishery. Most of these are likely to continue to affect economic outcomes in the future.

4.1.1 Environmental/Climatic Conditions

In the survey of licence holders of November 2006, respondents highlighted drought as a factor that influences economic returns. Reduction in catch as a result of drought generally affects finfish species. Drought conditions can also have a negative influence on cockle recruitment. Rough weather periods and hot weather affects the oxygen levels and can influence the ability to catch some species.

Due to the individual needs of many native fish species in the Lakes and Coorong Fishery, the volume, timing, duration, frequency and quality of water released into the lower lakes and Coorong is critical to spawning and recruitment success, overall population health and productivity levels (Pierce and Doonan 1999). Reduced river flows from the River Murray also affect the migration of fish into some areas of the Coorong. Reduced flows and less frequent flooding have caused sand to build up in and around the Murray Mouth that impedes migration of marine species into the Lakes and Coorong and reduces water quality. Dredging operations have been undertaken to maintain the Murray Mouth since 2003.

Fish-ways have been introduced to barrages to allow fish movement between marine environments and freshwater systems. The introduction of pilot fish ways will be beneficial to the Lakes and Coorong Fishery in the medium to long term.

Crabs and stingrays are predators to some Lakes and Coorong species, thus an increase in their population can impact on the economic performance of the fishery.

4.1.2 Stock Assessment

A status report for all key species in the Lakes and Coorong Fishery is undertaken on an annual basis. In these reports fishery-dependent data are used to assess the performance of the Lakes and Coorong Fishery against the Performance Indicators prescribed in the Management Plan (Sloan 2005).

Further information about the condition of the stocks of key species can be found in the Management Plan for the South Australian Lakes and Coorong Fishery (Sloan 2005).

4.1.3 Pipi Quota Management System

An increase in catch and effort in the commercial harvest of Pipi (Goolwa Cockles) has led to a review of the management arrangements. In December 2007, Pipi moved to a quota management system.

4.2 Licence Holder Comments

A number of licence holders, who participated in the November 2006 survey, raised several key issues that they felt affected the economic performance of their individual operations and the performance of the Lakes and Coorong Fishery as a whole. Licence holder comments relate to the following issues:

- licence fees;
- markets for products;
- stock assessment system;
- value adding in the fishery;
- management; and
- environmental issues.

The specific comments provided by licence holders on each of these issues are summarised in the previous years report (EconSearch 2007).

4.3 Prices for Lakes and Coorong Fishery Product

4.3.1 Wholesale prices for Lakes and Coorong Fishery species in South Australia

An outline of wholesale prices for fish species in South Australia for the period 1992/93 to 2006/07 is provided in Table 4.1. Wholesale prices in SA have trended upwards during this period for most species.

Table 4.1 Average annual wholesale price for Lakes and Coorong Fishery species, South Australia, 1992/93 to 2006/07 (\$/kg)

	1992/93	1993/94	1994/95	1995/96	1996/97	1997/98	1998/99	1999/00	2000/01	2001/02	2002/03	2003/04	2004/05	2005/06	2006/07

Source: Derived from Knight et al. (2004) and SARDI Aquatic Sciences.

4.3.2 Prices for Lakes and Coorong Fishery product in other domestic markets

As stated in Section 3.1, the gross value of catch data sourced from SARDI Aquatic Sciences are estimated on the basis of information provided by processors in South Australia.

The differential between wholesale prices in Adelaide and in the Sydney and Melbourne fish markets is illustrated in Table 4.2 for the three years 2004/05 to 2006/07 and in Figure 4.1 for 2006/07. Even allowing for freight and commission, it is likely that the gross value of production estimates for the Lakes and Coorong Fishery, as estimated by SARDI Aquatic Sciences (Knight et al. 2004), have been underestimated.

The lower prices obtained in Adelaide for some species can be attributed to two interrelated factors. One is that the average quality of fish sold in Adelaide is not as high as that being marketed interstate. The second factor is that consumer numbers in specialist markets (e.g. Asian and Jewish) are much lower in Adelaide than interstate and, therefore, there is not the demand to support prices for the high quality product sought in these markets.

In years where the catch of some species is low Adelaide prices reach a similar level to Melbourne and Sydney. Catch of Black Bream dropped to 7 tonnes in 2006/07 (Table 3.1), accordingly, there was only a small difference in price between Adelaide, Sydney and Melbourne.

Table 4.2 Prices for Lakes and Coorong Fishery species; wholesale prices in South Australia and the Melbourne and Sydney fish markets, 2004/05 to 2006/07 ^a

Major Species	Adelaide			Melbourne ^b			Sydney ^b		
	2004/05	2005/06	2006/07	2004/05	2005/06	2006/07	2004/05	2005/06	2006/07
Australian Salmon	\$1.25	\$1.33	\$1.50	\$1.03	\$1.36	\$6.85	\$1.24	\$1.38	\$1.52
Black Bream	\$9.17	\$9.86	\$12.75	\$9.29	\$10.02	\$10.82	-	\$10.04	\$10.15
Bony Bream	\$1.00	\$1.00	\$1.00	-	-	-	\$1.89	\$2.13	\$2.38
Callop	\$10.09	\$9.93	\$9.30	\$13.40	\$13.21	\$11.76	\$16.87	\$16.63	\$17.41
European Carp	\$0.66	\$1.24	\$1.19	\$1.30	\$1.30	\$1.27	\$2.05	\$2.10	\$2.12
Goolwa Cockle	\$1.22	\$1.61	\$1.95	\$7.60	\$3.26	\$5.01	\$4.77	\$7.32	\$9.99
Flounder	\$8.67	\$8.86	\$10.20	\$7.50	\$6.19	\$7.59	-	\$8.02	\$5.53
Yellow-Eye Mullet	\$2.23	\$2.46	\$2.84	\$1.85	\$1.36	\$1.36	-	\$2.36	\$2.58
Mulloway	\$5.54	\$5.08	\$6.20	\$4.38	\$6.76	\$4.41	\$7.39	\$7.36	\$8.80
Redfin	-	-	-	\$2.72	\$4.62	\$6.00	\$12.07	\$11.55	\$13.63

^a Weighted average nominal prices. Sydney prices are currently being prepared.

^b All prices reported from Sydney and Melbourne Fish Markets are wholesale, that is, before commission is taken into account. Currently, Sydney Fish Markets charges 9 per cent commission plus an environmental levy of 0.025 per cent. Melbourne Fish Market charges 11 per cent commission. Sydney market prices for 2003/04 are for product sourced from South Australia only. Melbourne market prices for all years and Sydney prices for 2004/05 and 2006/07 are for product from all sources within Australia.

Source: SARDI Aquatic Sciences, Tim Rieniets (Melbourne Wholesale Fish Markets, pers. comm.) and Samantha Dawes (DPI – NSW Fisheries, pers. comm.)

Figure 4.1 Prices for Lakes and Coorong Fishery species in South Australia, Melbourne and Sydney, 2006/07 ^a

^a Where data has been omitted it was either unavailable or no product was sold in that market.

4.4 Contribution to the Community

In addition to the economic contribution made to the regional and state economies (Section 3.5), the Lakes and Coorong Fishery also contributes to the social, environmental and heritage values of the region, through involvement in community-support activities and contribution to the provision, maintenance and expansion of local and regional services and businesses.

4.4.1 Community-support activities

The estimated time spent on community-support activities by licence holders (including licence holder’s family members and employees) in 2005/06 is summarised in Table 4.3.

On average, each licence holder (including family members and employees) spent at almost 3 days (21 hours) per month on community-support activities. Almost 6 hours per month were spent on attending fishing and Lakes and Coorong region related meetings, etc.

Table 4.3 Estimated time per month spent on community-support activities, 2005/06

Community Activity	Hours per month	
	Average Per Licence Holder	All Licence Holders ^a
Conservation activities (e.g. bird watch, water watch)	1.1	41
Marine rescue and recovery	3.2	116
Attending meetings, seminars, workshops	5.9	211
Compiling fishing-related information for research purposes	3.0	107
Provision of technical advice to committees, panels	3.4	123
Volunteering for community services (e.g. CFS, SES)	3.3	119
Other	0.6	22
Total^b	20.5	737

^a Calculation based on scaling up average hours per month per licence holder for all 37 licence holders.

^b Totals may not sum due to rounding.

Source: 2006 survey response.

Lakes and Coorong Fishery licence holders, as a whole, spent a minimum of almost 740 hours per month on community-support activities.

Assuming the value of time foregone is approximately \$20 per hour¹⁴, the average value of each licence holder's time spent on community-support activities was at least \$410 per month or \$4,915 for the full year (2005/06). On a whole of fishery basis, the aggregate value of time spent on community-support activities was at least \$14,750 per month or around \$177,000 for the full year.

In addition to the above mentioned community-support activities, licence holders indicated that there are a number of other ways that the Lakes and Coorong Fishery contributes to social, environmental and heritage values of the local community including:

- assisting local sporting clubs (e.g. coaching, fundraising, social events);
- removal of introduced pest species of fish (i.e. carp, redfin);
- removal of rubbish from water, lake banks etc.;
- donating fish to community groups for fundraising, school camps etc.;
- caring for the elderly (e.g. cooking, donating fish, Meals on Wheels);
- reporting illegal fishing activities to PIRSA, police and National Parks and Wildlife Service;

¹⁴ Valuation of time is a difficult concept. The key question is whether one should use the value of time in work to value time spent on leisure or other non-work related activities. The use of \$20 per hour is an approximation of the opportunity cost of time in work for the average person (i.e. an approximation of the average wage rate). The Australian Bureau of Statistics used 3 methods to value volunteers' time and produced a range of estimates from \$19.29/hr to \$22.51/hr in 2006 dollars (inflated from 1997 estimates (Ironmonger 2002, p. 3)).

- assisting local schools (i.e. taking on work experience students, assisting with reading programs, donating fish for camps, supervising school camps, taking students on tours of the Coorong), etc.;
- assisting government agencies and university students undertaking research into the fishery;
- identifying aboriginal sites;
- office bearer/member of local associations (i.e. Town Hall, sporting clubs, Local Council, Parents and Friends Committee); and
- passing on valuable knowledge and information regarding the Lakes and Coorong environment and the fishing industry to local residents from outside the fishing community, tourists and recreational fishers.

4.4.2 Local and regional services/businesses

The operation of the Lakes and Coorong Fishery (and the employment the fishery generates and the households it maintains) has either directly or indirectly contributed to the provision, maintenance and expansion of a number of local and regional services and businesses. A summary of the Lakes and Coorong Fishery's contribution to various services and businesses is provided in Table 4.4.

Note that some of the fishery's contribution to the community is quantified in section 3.6, but the need for services (e.g. schools, police etc.) and the contributions to various organisations (e.g. hospitals) means the fishery contributes to the community in more ways than just generating income and the direct purchase of goods and services.

While it was difficult to quantify the contribution the fishery makes to local and regional services and businesses, an estimate was made of the number of children from fishing families and fishing families' employees that attended local schools.

Of those who participated in the survey there were 66 children (under the age of 18) who were members of fishing families and fishing families' employees in 2006/07. Thirty-one children belonged to licence holder families and 35 were children of employees. Of these 66 children, 60 of them attended local schools. Twenty-five children assisted with fishing operations.

Table 4.4 Fishery contribution to local and regional services/businesses, 2005/06

Service/Business	Location	Fishery Contribution
School	Goolwa, Meningie, Milang, Victor Harbour	Children attend, donate fish, cooking classes
Schools/Universities	Adelaide, Goolwa, Meningie, Murray Bridge, Victor Harbour	Work experience for students, provide advice
Hospitality/food service industry	Clayton, Goolwa, Meningie	Supply fish
Sporting Clubs/Community Groups/Fundraisers	Goolwa, Meningie	Supply fish
Animal Welfare League	Goolwa	Supply fish
Fishing Club	Meningie	Donate cockles for bait
Fish buyers	Adelaide, Meningie	Supply fish
Fish processing	Meningie, Murray Bridge	Supply fish
Marine supplies dealers	Goolwa, Meningie	Purchase nets, tackle etc.
Fuel suppliers	Goolwa, Meningie	Purchase fuel for boats and vehicles
Hospital	Meningie	Donate fish for meals
Fish retailers (e.g. supermarkets, butchers, fish shops)	Meningie, Murray Bridge	Supply fish
Freight carriers	Adelaide, Goolwa, Meningie, Murray Bridge	Transport fish to markets
Ice suppliers	Meningie, Murray Bridge, Victor Harbour	Purchase ice
Cockle processors/exporters	Goolwa	Supply cockles
Mechanics	Goolwa, Meningie	Vehicle and boat maintenance
Boat makers	Goolwa	Purchase boats and motors
SZ rock lobster licence holders	Kangaroo Island, Kingston SE	Supply bait

Source: 2006 survey response.

4.5 Other Indicators

In addition to financial information, a range of other information was collected from licence holders during the survey regarding their fishing operations.

4.5.1 Time in fishery

The number of years that licence holders in the Lakes and Coorong Fishery had owned fishing licences ranged from 1 year to 42 years, with an average length of ownership by individual licence holders of 15 years.

Several fishing families have held licences for a number of generations. On average, each family had held a licence for 17 years, however, this timeframe ranged from 1 year to 56 years.

4.5.2 Age of licence holders

The majority of licence holders were aged between 36 and 50 years at the time of the survey, with the highest number of licence holders in the 36-40 year and 46-50 year age bracket (25 per cent in each) (Table 4.5).

The average age of Lakes and Coorong Fishery licence holders is considerably lower than that for South Australian owner/managers of broad acre and livestock properties. In 2004/05, the average age of farm owner/managers was 53 years (ABARE 2006).

Table 4.5 Age of Lakes and Coorong Fishery licence holders, 2005/06

Age Bracket (years)	Number from Survey Sample	Proportion
< 25	0	0%
26-30	0	0%
31-35	1	4%
36-40	6	25%
41-45	4	17%
46-50	6	25%
51-55	2	8%
55-60	1	4%
> 60	4	17%
Total	24	100%

Source: 2006 survey response.

4.5.3 Fishing location

Survey respondents fished in three locations: the lakes (i.e. Lakes Alexandrina and Albert), the Coorong and the Southern Ocean (near the River Murray mouth). The majority of licence holders (approximately 60 per cent) indicated that they fished in more than one of these locations during the 2005/06 season. In 2005/06, the lakes were the most popular location fished. Eighty-three per cent of survey respondents (20 licence holders) indicated that they fished in the lakes, 67 per cent (16 licence holders) fished in the Coorong and 46 per cent fished in the ocean (11 licence holders). Survey respondents advised that the ability of licence holders to shift effort between environments and between species contributes to the long-term viability and sustainability of the resource.

4.5.4 Value of catch and effort data

Catch and effort data, recorded and submitted monthly to SARDI by Lakes and Coorong Fishery licence holders, are used in stock assessment and stock status reports. These data may also be used for other research, for example, these data are of particular interest to recreational fishers and for researchers monitoring the impact of changes in river management (i.e. changes in salinity, flow rates, river height etc.) on the health of the Lakes and Coorong ecosystem.

It was estimated from the 2006 survey of licence holders that, in total, licence holders spent approximately 107 hours per month compiling catch and effort data in 2005/06, which equated to 1,280 hours for the year. The value of licence holder's time spent on the collection of catch and effort data was almost \$26,000¹⁵ in total in 2005/06.

¹⁵ Assuming the value of licence holder's time foregone is approximately \$20/hour (section 4.3.1).

^a SARDI estimates for the years 1990/91 and 1991/92, revalued SARDI estimates using Baker and Pierce (1998) for the years 1992/93 to 2001/02 and survey based readjustment factors for 2002/03 to 2005/06. Excludes the River fishery for the years 2003/04 to 2005/06.

^b SARDI estimates for the years 1990/91 to 2002/03, revalued SARDI estimates for 2003/04 to 2005/06 using weighted average prices from Sydney and Melbourne fish markets and price data obtained from fishers.

^c Excludes aquaculture, south east non-trawl, tuna, deep water trawl.

^a Financial performance for blue crab are on a whole sector basis. Survey estimate of income for the pot sector are higher than SARDI estimates (Appendix Table 2.2). The reason for the difference is that SARDI estimates are based on Adelaide prices, whereas licence holders are also selling to the higher priced Sydney & Melbourne markets.

^b Excludes the Commonwealth managed fisheries: south east non-trawl, tuna, deep water trawl.

^c Earnings before interest and tax.
