New declared plants in South Australia

Five tips for successful weed control

1. **Plan your controls**
   - Get to know plants on your property
   - Insist that vehicles, machinery, produce and property are weed free
   - Minimise damage to non-weeds
   - Establish and promote a wide range of weed control methods
   - Use selective herbicides where possible

2. **Watch your spread**
   - Make sure your property is weed free
   - Inspect your property monthly
   - Prune new plantings to limit spread
   - Remove weeds at the seedling stage

3. **Get to know plants on your property**
   - Young plants are easier to control
   - Be aware of changing opportunities
   - Find out what provisions of the NRM Act apply to each plant
   - Find out what powers of the Act are needed to implement one or more of the strategic plans

4. **Intricate control method. Use selective herbicides where possible**
   - Limit the establishment and spread of a plant, thereby increasing the plant's value from the end users' and control system.
   - Plant systems are under various sections of the NRM Act.

5. **Notifiable**
   - Some declared plants must not be moved on your property for disposal.
   - Some declared plants must not be grown on your property for disposal.
