DECISION RULES

TACC level

- Commercial CPUE from the previous season as the primary indicator is used to determine a CPUE range. The recommended TACC for the following fishing season is derived from the TACC listed above for that relevant CPUE range.

TACC Increase

- A TACC increase in any fishing season relative to the TACC in the season immediately preceding it will only be considered if PRI is equal to or greater than the trigger reference point (1.30 undersized/potlift)
 - Any increase in TACC will be restricted to a maximum of one level per year.
-
